

Pocket-Pick™

IPTI has been providing voice directed picking systems for over 12 years. Our extensive experience allows us to properly apply this leading edge technology to your warehouse operations. IPTI's continuously strives to lead the industry with all its product offerings. In that spirit, IPTI has developed the **Pocket-Pick™** Voice Recognition System. This system utilizes a standard Pocket PC PDA or industrial Pocket PC along with software and applications developed by IPTI to provide a durable and

user friendly voice platform. The **Pocket-Pick™** system has the distinct advantage over competing systems in that it offers a display and touch screen interface for handling supplementary functions such as shorting, location validation, SKU lookup, order details, etc, which make voice only units very inefficient and difficult to operate and maintain.

Key Features and Benefits

- Allows Efficient Hands Free Picking
- Cost Effective and SKU Independent
- Best Suited for Full Case Picking Systems
- Maintains Picker Accountability
- Increases Accuracy Over Paper Based Systems
- Uses Pocket PC Platform which Provides User Friendly and Efficient Interface for:
 - Loading Individual Voice Pattern Files
 - Verifying Supplementary Information such as SKU, Lot Numbers, Item Descriptions, Last Picks, Inventory, etc.
- Integrates with Existing 802.11b Wireless LANs in Real-Time or in Batch Mode.
- Integrates with IPTI's Time Proven Order Fulfillment Software Suite
